

Flexential Cloud Fabric

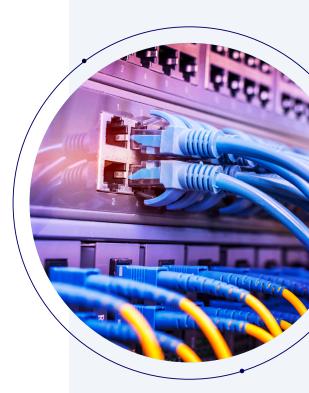

Direct, dedicated connectivity to cloud and carrier destinations

As your business connectivity requirements continue to evolve, you need the ability to manage multiple connections to multiple cloud and carrier destinations without losing sight of the associated costs and complexities. The demand for public cloud and network services is rapidly increasing and in order to maintain consistent application performance and reduce latency, businesses should leverage private, direct connections to the leading cloud and network service providers. The Flexential Cloud Fabric solution supports your evolving business needs to ensure premium application performance and service availability while optimizing your network costs.

Cloud Fabric, part of Flexential Interconnection, allows you to configure direct, dedicated connections to leading cloud service providers and carrier destinations. Through the Cloud Fabric Portal, you can add, change and scale your connectivity options on-demand using a simple interface. As your business goals change and evolve, ensure your connectivity strategy can do the same.

Step 3: Configure connection and complete order

By the end of 2024, 30% of enterprises will employ software-defined connectivity service to connect to cloud service providers, up from 10% in 2020.

-Gartner

Features _

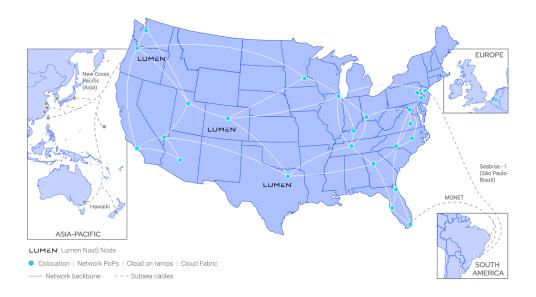

- Secure, direct connections to AWS, Google Cloud, Microsoft Azure, Oracle Cloud, and Lumen NaaS
- · On-demand, real-time provisioning in hours, not days or weeks
- Self-service capabilities to add, change, and scale connectivity options, as needed, from a single pane of glass

Benefits _

- Streamlines management of cloud service providers and carrier destinations
- Allows rapid network strategy configuration changes
- Enables self-provisioning of virtual connections

Flexential Cloud Fabric is available across every Flexential market. Manage connectivity to your cloud and carrier destinations across the country from one simple user interface.
