

# Vulnerability assessment

If you feel vulnerable to data threats despite increased spending, you're not alone. Of 1,200+ senior security executives polled around the world, more than three-quarters plan to increase IT security spending to offset threats, yet 92% still feel vulnerable to attacks, according to the 2018 Thales Data Threat Report. More alarming, more than two-thirds have experienced a data breach.

The Flexential professional services team helps organizations assess their vulnerabilities, improve their security posture and quickly and effectively counter attacks. Diving deep into your current state, our certified security experts will assess your IT systems and processes, identifying potential issues with devices, configurations and policies that can leave your organization exposed to cyberattacks.

Each engagement combines automated tools with hands-on analysis by qualified engineers who produce a detailed, risk-based report with actionable recommendations for mitigation.

**"Flexential offers us the security, redundancy and other IT requirements that the Chamber just couldn't provide on its own. And there's that peace of mind that you just can't put a price on."**

Mike Montagna  
Vice President of Information Systems  
Charlotte Chamber of Commerce

## Features

- Objective expertise in multi-platform management and compliance
- Thorough review of IT processes and systems, including devices, configurations and policies
- Practical, attainable and actionable remediation plan
- Tight integration with Flexential data center support team

## Benefits

- Gain confidence from experts on mitigating risk and vulnerabilities
- Minimize downtime risk and its impact on the organization
- Maintain security of systems hosted in Flexential data centers or elsewhere
- Reduce critical data loss impacting productivity, customer satisfaction and profitability
- Demonstrate your commitment to maintaining business continuity

## Data breaches are the new norm

Digital transformation has ushered in a new era of unprecedented data breaches impacting all types of organizations. Accelerated adoption of cloud services, big data applications, IoT and mobile payments often comes at a cost, with organizations deploying these new technologies ahead of their ability to properly secure them, according to industry analyst firm 451 Research.

## Thorough, objective risk exposure assessment

The Flexential professional services team can perform credentialed and uncredentialed scans of your devices, servers and applications to inspect any potential points of exploit. We'll provide an actionable plan for mitigating gaps with projected resources and realistic timelines. We conduct our review in an open, ethical manner so you can trust the results.

## Security is not a tool, it's a strategy

Protecting your organization requires strategic planning, investment and oversight. It's not enough to implement the latest solution and walk away. Flexential can help you develop a comprehensive security strategy, identify your vulnerabilities, protect critical information and infrastructure assets and quickly restore operations if you experience a breach.

Flexential helps organizations optimize IT transformation while simultaneously balancing cost, scalability, compliance and security. With a focus on building trusted relationships, providing valuable support and delivering tailored solutions and reliable performance, Flexential delivers colocation, connectivity, cloud, managed solutions and professional services to 4,200 customers across the U.S. and Canada.
