Cloud readiness assessment

Planning a move to the cloud involves wrestling with a complex series of technical and business questions. On the technology side alone, you'll need to consider which applications, workflows and infrastructure are suitable for which cloud environment. You also should view these decisions in the context of your larger business strategy and meeting the needs of multiple stakeholders.

While navigating your cloud journey requires detailed planning and delicate deliberation, you don't need to go it alone. The Flexential professional services team can provide you with a comprehensive cloud readiness assessment that allows you to bypass unforeseen obstacles. We'll address cloud implementation concerns in a best-practice manner – before, during and after migration – while meeting your budgetary and business requirements.

From assessing your cloud needs and building your cloud architecture to implementing and testing your new environment, Flexential will account for a full range of variables to help you create and maintain a cloud model that supports your strategic business objectives.

How not to leap to the cloud

When it comes to moving applications to the cloud, many organizations choose a do-it-yourself approach, which taps already-stretched IT resources. A project as complex as an enterprise cloud migration could benefit from the support of outside resources with informed perspectives and expertise across varied dynamics, including regulatory compliance, internal integration and adoption barriers.

Objective cloud readiness evaluation

Flexential helps organizations consider multiple factors central to moving applications to the cloud. We'll advise you on leading tools to enhance services automation and detail best practices for governance, application design and performance, as well as security and interoperability with legacy IT infrastructure. We conduct our review in an open, ethical manner so you can trust the results.

Long-term vision

The migration methodologies within our cloud readiness assessment process provide a reusable framework to create lasting value for your organization inclusive of long-term guidance for future optimizations around cost, performance and resiliency.

Flexential helps organizations optimize IT transformation while simultaneously balancing cost, scalability, compliance and security. With a focus on building trusted relationships, providing valuable support and delivering tailored solutions and reliable performance, Flexential delivers colocation, connectivity, cloud, managed solutions and professional services to 4,200 customers across the U.S. and Canada.
