Dedicated servers

Single-tenant private cloud services

While shared server web hosting can be an economical option, it isn't always the optimal solution for those who experience high traffic volumes. The best option for businesses who want better control, bandwidth and speed is a single-tenant, private cloud solution.

Flexential dedicated servers are ideal for businesses who want a cloud environment that is accessible only to them and not shared by other Flexential customers. Our dedicated servers can enhance the quality of the services delivered to your customers and reduce the time it takes to create and deploy new products and services to market.

Flexential dedicated servers are best suited for high-performance, intensive-compute workloads, as well as simple web hosting in the following areas:
- Gaming
- Video streaming
- Healthcare
- Education
- Web hosting

"Knowing that Flexential has our back and is there for us to make sure that our critical infrastructure is in place during the times that we need it is critical to us."

Mike Schulze
Director of Communications and Sponsorships
Outback Bowl

Features

- OS installation and management
- Installation of Docker (if required)
- Hardware and database monitoring
- Flexential SysAdmin platform
- Managed IP bandwidth and firewall services
- Standard, select and premier service levels

Benefits

- Minimize capital expense with no equipment purchases or upfront costs
- Reduce time and cost of infrastructure and hardware management
- Enhance security and performance with 100% uptime
- Customize each server with its own IP address
- Servers supported by Flexential experts

FLEXENTIAL

Why Flexential dedicated servers?

Flexible
A dedicated server allows you the flexibility to customize the server to your unique needs. Our experts will work with you to design and implement a successful application architecture, with fully customizable hardware, platform and software. You can even change the platform and operating system to manage different projects.

Secure
Dedicated servers provide more security, stability and reliability than shared hosting. Flexential continually monitors the server hardware and we are industry-certified and compliant with all relevant standards for data security.

Reliable
You don't have to worry about another business sapping resources from your server. Dedicated server hosting offers higher performance levels than shared environments since all the server's resources are available to only your application. Flexential also provides you with a dedicated secure management connection so you can securely manage your environment when it's convenient for you.

Flexential helps organizations optimize IT transformation while simultaneously balancing cost, scalability, compliance and security. With a focus on building trusted relationships, providing valuable support and delivering tailored solutions and reliable performance, Flexential delivers colocation, connectivity, cloud, managed solutions and professional services to 4,200 customers across the U.S. and Canada.
