

Managed firewalls

A secure firewall is a critically important component of your IT infrastructure. Without it, a hacker could easily access confidential or proprietary information, damaging your brand and risking fines for non-compliance. According to Complex-IT, an estimated 95% of firewall breaches are due to misconfigurations, not firewall flaws.

A firewall can be an expensive investment, and requires constant management, maintenance and monitoring to ensure maximum protection. Managed firewall services help eliminate time-consuming and resource-heavy challenges and unify security management for this indispensable line of defense in a cost-effective way.

The Flexential managed firewall service is a perimeter security and network protection offering for both cloud and colocation environments. With state-of-the-art inspection of network traffic and virtual private networking support, your organization receives next-generation firewall technology managed by a team of IT security professionals who proactively detect threats and mitigate security issues before they happen.

“Our Flexential managed firewall gives me more time to focus on management versus engineering, and has freed up time to work on other responsibilities rather than having to sit and hack things out myself.”

Andy Keeney
Director of IT
Presbyterian Foundation

To learn more about Flexential services, contact us at 888.552.FLEX or sales@flexential.com

Features

- Firewall configuration, management and maintenance
- 24/7 monitoring and alerting
- Trained and certified firewall security administrators
- Detailed reports on activity across your network
- Documented firewall, NAT and DDoS policies

Benefits

- Ensure proactive threat detection
- Gain access to the latest firmware, updates and threat definitions
- Eliminate firewall misconfigurations
- Unify security management
- Reduce equipment and personnel investment

Professional security management

Security management can be time-consuming and a drain on IT resources. With Flexential managed firewall services, we provide trained and certified firewall security administrators who are experienced in configuring and managing firewalls, keeping them up-to-date and trouble-free. Your IT team can focus on the important initiatives that move your business forward.

The right fit for your network

The Flexential managed firewall service includes configuration, monitoring and hardware replacement, and is available in right-sized tiers (both physical and virtual) based on performance requirements. We also include static and dynamic (OSPF, BGP) routing, VLAN segmentation (up to 10 networks) and up to 25 site-to-site, remote client and/or SSL VPN connections.

Detailed reporting and guidance

Comprehensive knowledge of the traffic and activity taking place on your network can help you understand potential threats your organization faces, where they are coming from and where you might have security weaknesses. Our experts log detailed activity reports to help you proactively mitigate issues and ensure your network maintains the highest levels of protection available.

Flexential helps organizations optimize IT transformation while simultaneously balancing cost, scalability, compliance and security. With a focus on building trusted relationships, providing valuable support and delivering tailored solutions and reliable performance, Flexential delivers colocation, connectivity, cloud, managed solutions and professional services to 4,200 customers across the U.S. and Canada.
