

Flexential Cloud Connect

An Interconnection Service Option Available on the FlexAnywhere™ Platform

Flexential Cloud Connect provides businesses with a simple redundancy solution between data center environments through a multi-tenant, secure, private connection from an on-premise data center or Flexential facility to public cloud infrastructure, including any AWS U.S. availability zone, Azure, Google, IBM Cloud, Salesforce, Alibaba and Oracle. These connections use private Flexential transport links that offer more reliability, greater speeds, consistent latencies and higher security than typical internet connections.

Flexential Cloud Connect is just one of the reliable, easy-to-use and flexible network service offerings that make up FlexAnywhere, a comprehensive software-defined network infrastructure platform.

Flexential Founded
1999

Features

- Direct connection to cloud providers' regional compute via the Flexential network backbone
- End-to-end visibility of customer connections
- 100% availability SLA
- Traffic connects at carrier hotels to the Flexential SDN to provide the final cloud provider connections

Why Flexential?

- Scalable connectivity: Increase and decrease your bandwidth at any time to suit your business demands
- Multi-cloud ecosystem: Provision direct connectivity to multiple leading cloud and network providers in the Flexential ecosystem
- Multiple cloud regions: Connect to multiple cloud regions from a single interconnection point for cost-effective, multi-region redundancy
- Cloud-to-cloud connectivity: Establish seamless connectivity between regions and cloud service providers without the need to own and manage physical infrastructure
- Flexible terms: Contract terms that align with cloud consumption models
- Abbreviated provisioning: Provision connections in five business days or less—not weeks or months
- Powerful API integration: Manage your connectivity autonomously and optimize your workflow by utilizing Flexential's powerful API
- One service provider, one bill

Connect from any-to-any (IP VPN) network, a point-to-point Ethernet network or a virtual cross-connection through a connectivity provider at a colocation facility.

Cloud Connect is Ideal for:

- Hybrid IT strategies
- Multi-cloud strategies
- Periodic data migration
- Replication for business continuity and/or disaster recovery
- High-availability strategies
- Transferring data sets for high-performance computing applications
- Moving large virtual machines between development testing environments in public clouds and the Flexential production environment

Cloud Connect Benefits:

- Connectivity to public cloud services across all regions in the geopolitical region
 - Global connectivity to public cloud services across all regions with ExpressRoute or AWS Direct Connect
 - Dynamic routing between Flexential's network and public clouds over industry standard protocols
 - Built-in redundancy in every peering location for higher reliability
 - 100% connection uptime SLA
- Guaranteed Layer 2 connectivity from your colocation environment to the cloud provider of choice

ABOUT FLEXENTIAL

Flexential empowers the IT journey of the nation's most complex businesses by offering flexible and tailored solutions in colocation, cloud, data protection, managed and professional services. The company builds on a platform of three million square feet of data center space, in 20 highly connected markets and the FlexAnywhere™ 100 GB private backbone, to meet the most stringent challenges in security, compliance and resiliency.
