

Anatomy of a Network Hub

Connect privately and securely to network, cloud, and digital partners in markets closer to users

Real-world use cases:

- Remote office connects to HQ and cloud via Network Hub
- UCaaS provider rides the Flexential backbone for low-latency calls
- SD-WAN traffic aggregates in one place for optimization
- Hybrid cloud apps need fast, secure interconnects

Network Hub customer benefits

Network Hub is perfect for organizations who:

- Are struggling with latency, lag, or poor app performance
- Need to connect multiple locations, clouds, or providers
- Want to scale network access quickly without major capex
- Are deploying SASE, SD-WAN, UCaaS, or hybrid cloud solutions

Key benefits:

- **Faster performance:** Localized access = reduced latency
- **Connect privately and securely** to network, cloud, and digital partners in markets closer to users
- **Enhanced security:** Keep traffic off the public internet
- **Scalable & flexible:** Add locations or user easily
- **Cloud-ready:** Connect to AWS, Azure, Google, etc.
