

Flexential Cloud Fabric

Private, software defined connectivity to the clouds
and carriers your business relies on

Flexential Cloud Fabric gives you fast, secure, and direct access to leading cloud service providers and carrier destinations—provisioned on demand through a single, self service experience in the Flexential Xperience Portal (FXP) and integrated with Flexential Marketplace.

With one physical port, you can stand up multiple virtual connections to AWS, Microsoft Azure, Google Cloud, Oracle Cloud, and more across a private, redundant 100 Gbps backbone—improving performance, lowering latency, and reducing egress costs compared to public internet paths.

Inside the Marketplace within FXP, customers can discover CSP profiles, view available on ramp locations by provider, and use guided workflows to build private, virtual connections in minutes—not days or weeks.

Why Cloud Fabric

- **Unify hybrid and multicloud connectivity:** Manage multiple cloud and carrier connections from one place without juggling separate contracts or tickets.
- **Speed with control:** Automate interconnections and scale bandwidth on demand to match evolving business needs.
- **Performance you can feel:** A private, nationwide 100 Gbps backbone helps minimize network and server latency for consistent application experiences.

Business benefits

- **Simplified operations:** Centralize multicloud and carrier connectivity, reduce manual provisioning steps, and streamline change management via FXP.
- **Faster time to value:** Activate services quickly with automated, user driven workflows in Marketplace.
- **Better performance, lower latency:** Keep critical traffic on a private backbone to improve application responsiveness.
- **Cost optimization:** Right size committed bandwidth as needs change and reduce reliance on public internet egress.
- **Scalability with flexibility:** Add or adjust connections on demand without new physical builds, supporting evolving hybrid IT strategies.

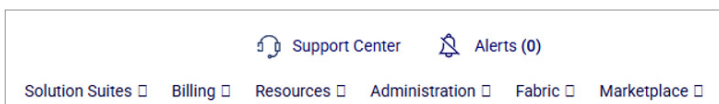

How it works

Step 1:

Login to FXP

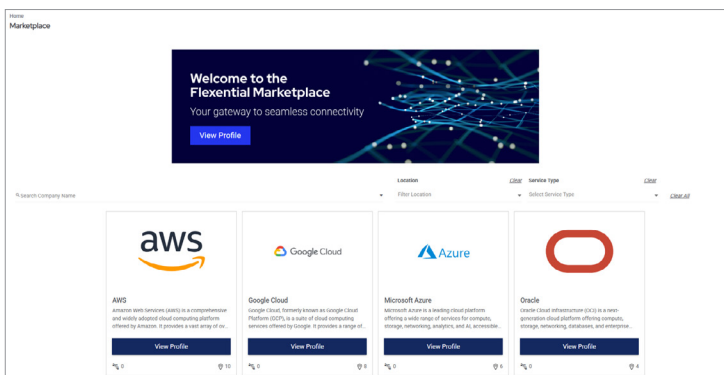

Step 2:

Click Marketplace > View Marketplace

Step 3:

Choose your CSP or carrier

Key features

- **Direct, private cloud on ramps** to AWS, Microsoft Azure, Google Cloud, and Oracle Cloud—plus carrier destinations—delivered over the Flexential private backbone
- **Single port, software defined interconnection** to spin up, change, and tear down multiple virtual circuits through an intuitive FXP interface
- **On demand provisioning** so new and existing connections can be deployed in minutes instead of days or weeks
- **Self service orchestration in Marketplace** to discover providers, view on ramp access within CSP profiles, and complete orders with automated workflows
- **Nationwide reach** across Flexential markets so you can manage cloud and carrier connectivity from a single UI
