

VMware Continuum Program

Flexibility today. A clear path forward tomorrow.

Recent changes to VMware licensing and commercial models are causing many organizations to reevaluate their infrastructure timelines and long-term commitments. For teams planning a future cloud transition, committing to a multi-year agreement before they are ready can introduce unnecessary cost, complexity, and operational risk.

The **VMware Continuum Program** from Flexential provides a flexible bridge strategy—helping organizations maintain operational continuity today while establishing a defined path to modern cloud infrastructure on their own timeline.

Program overview

The **VMware Continuum Program** enables organizations to continue operating within their existing VMware environment while **planning and preparing for a transition to Flexential cloud solutions**.

Through a flexible commercial model, organizations can **maintain continuity, reduce disruption, and avoid premature long-term commitments** while building a practical modernization roadmap.

Key benefits

- **Avoid** unnecessary long-term infrastructure commitments
- **Maintain** operational continuity with minimal disruption
- **Align** infrastructure strategy to actual business timelines
- **Reduce** migration and modernization risk
- **Create** a clear path toward future cloud adoption

How it works

- **Continue operating** within your existing VMware environment
- **Leverage a flexible interim** commercial model
- **Establish a defined roadmap** toward Flexential cloud solutions
- **Transition workloads** on a timeline aligned to your business needs

A practical bridge to what's next

The **VMware Continuum Program** helps organizations navigate change without forcing rushed infrastructure decisions—providing flexibility now while supporting long-term modernization goals.

Ideal for organizations that:

- **Expect to migrate** workloads within the next 6–12 months
- Are **reassessing infrastructure** plans due to VMware/Broadcom changes
- Want **greater flexibility** during infrastructure transition periods
- Need to **maintain stability** while evaluating long-term cloud strategy
