

Hosted Private Cloud Advanced Access

Cloud without compromise

Customers want the ability to operate their cloud environment with **the same level of control and with the same access to existing toolsets** that they have within their on-premise data center.

Hosted Private Cloud – Advanced Access, a single-tenant cloud solution, provides direct access to VMware's vCenter so they can manage and configure infrastructure resources to provide and maintain optimal levels of performance, efficiency and utilization of their cloud environment.

Acceleration of cloud adoption continues as customers look to move workloads to the cloud

Hybrid cloud usage will grow by **21% annually** through this year.

More than **90%** of organizations are expected to **adopt hybrid cloud approaches** through 2027.

\$7.9 Billion

Private cloud services to grow at an annual rate of 18.2%, for a **total spend of \$7.9 billion** by 2029.

\$850 Billion

Public cloud spending is expected to surpass **\$850 billion** in 2026, growing more than **21% year over year**.

\$6.31 Trillion

Worldwide IT spending will reach **\$6.31 trillion** this year.

However, the path to cloud and hybrid IT is not without challenges...

Challenges faced by today's enterprises

01

Desire to offload the management of underlying infrastructure of the IT stack while maintaining control and management of the application layer

02

Most cloud providers force customers to utilize their own tool sets which comes with a steep learning curve and stifles efficiency gains

03

Enterprises need help to determine the right environment for each workload

04

It's difficult to run workloads on-premise, in private clouds and public clouds

05

Desire to move to cloud without giving up the deeply integrated tool sets to do configuration management, backups and migrations

How Hosted Private Cloud – Advanced Access

enables hybrid IT

Critical capabilities to consider

Full control

Direct, unobstructed access and permissions to the VMware vCenter server to do configuration management

Third-party application integration

Fully manage vCenter and third-party applications or plug-ins on top of infrastructure

Optimal investment protection

Utilization of existing toolsets = nothing new to learn, optimal investment protection ROI, and lowest TCO

Fully dedicated and secure solution

Dedicated infrastructure that comes fully compliant for peace of mind

Advanced reporting

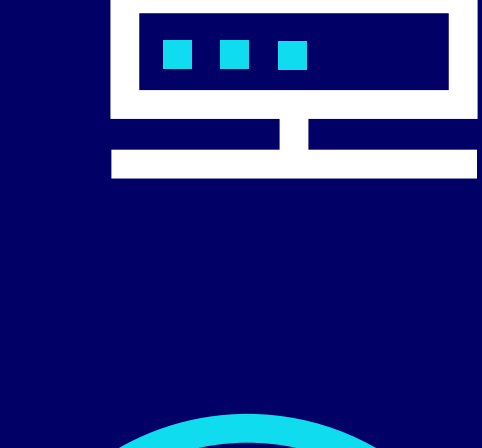

Real-time predictive analytics and AI drive actions to balance workloads and proactively avoid contention

Advanced migrations

Provides the ability to perform Scheduled, live, or bulk migration of VMs across data centers and clouds

Hosted Private Cloud – Advanced Access

enables hybrid IT

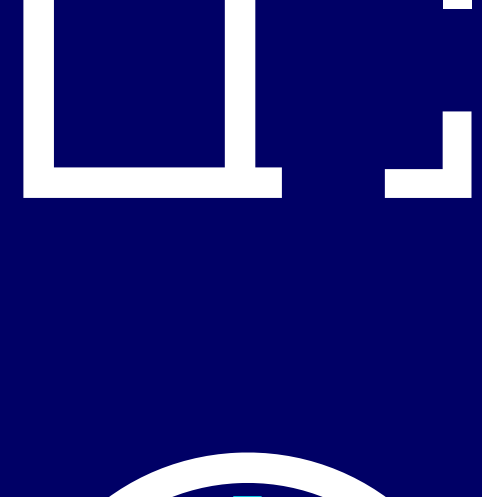

Mission-critical applications

Optimal for mission-critical applications that can't be impacted by downtime—backed by industry leading SLAs and 100% guaranteed availability

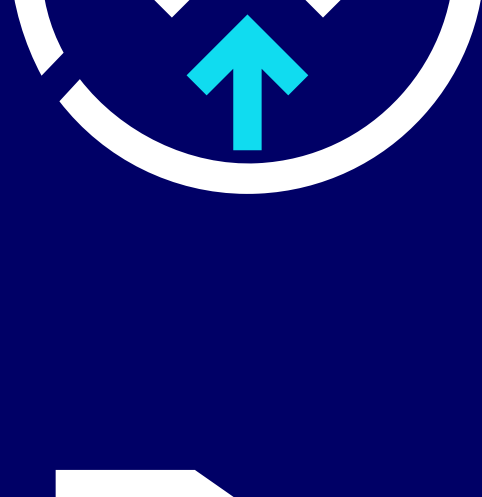

Data center migrations

Easily extend workloads and applications to the cloud and burst into public cloud using Flexential's end-to-end cloud, connectivity and managed service portfolio

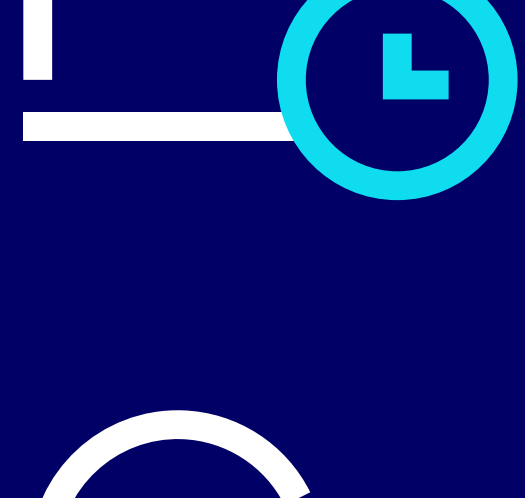

Data center expansions

Expand and scale into a single-tenant cloud environment easily while utilizing the existing third-party tool sets and industry-leading VMware platform that more than 70% of global users currently utilize

Data center consolidation

Optimize your data center spend by rightsizing your DC environment - identify and eliminate over-provisioning and stranded resources by moving applications to a hosted private cloud

Backup and recovery

Enable the implementation of a custom backup / snapshot strategy using tools that you've already invested in and are familiar with using

DevOps tools

Provides the ability to leverage best-of-breed DevOps tools within their cloud environment across the software delivery lifecycle

Flexential solves IT infrastructure challenges with a comprehensive set of tailored hybrid IT solutions including the new Hosted Private Cloud – Advanced Access solution that allows customers to offload compute, network, storage, licensing and facilities requirements while maintaining the control and management of the application layer and orchestration of resources in-house.

This functionality is achieved by Flexential providing customers with direct access to the industry standard vCenter to manage workloads in a way that is already used by the client, leveraging their existing IT applications and tools while maintaining control over the hardware and storage platforms.
