

Flexential Cross Connects

Flexential Cross Connects provide private, low-latency connection within the Flexential ecosystem

Cross connects serve as the building blocks of interconnection in data centers. Providing a private, low latency connection between two parties, cross connects enable high performance and reliability, helping organizations optimize networking costs and simplify connectivity in an increasingly complex digital landscape.

Using a physical fiber connection within and between data centers located on the same metropolitan campus, Flexential Cross Connects enable access to a wide range of carriers, content providers, service providers, and partners within the Flexential ecosystem.

Utilize Flexential Cross Connects to securely deliver private, direct connectivity, minimize latency, and reach the enterprises and destinations that are critical to your organization's digital future.

Flexential deploys cross connects on wide industry standard single-mode fiber (SMF). Additionally, Flexential offers several cross connect products to enable you to reach the carriers, clouds, and IT service providers your business requires.

- **Standard (Carrier) Cross Connect:** Connect your cabinet to a service provider or other entity located in a Flexential data center Meet Me Room (MMR).
- **Data Center Cross Connect:** Connect to a non-contiguous deployment/your own equipment residing in the same data center.*
- **Campus Cross Connect:** Connect to an entity residing in a different data center.**
- **Platform Connect:** Connect to Flexential Cloud and Data Protection services located in the same data center as your colocation deployment.

**Please note the entity must be governed under the same agreement and reside in the same data hall.*

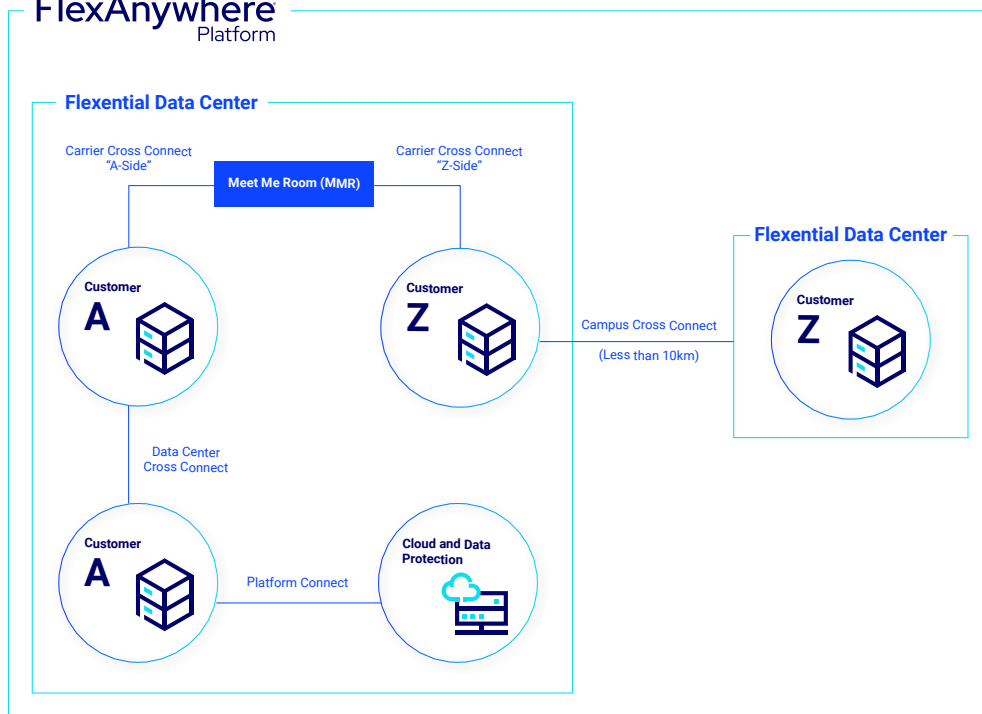

***Please note the proximity must be greater than 10 km.*

Benefits

The Flexential extensive nationwide interconnected network provides industry-leading services to 40+ facilities across 18 markets, including:

- 11 carrier hotels
- 370+ on-net carriers
- 5 subsea cables connecting to Asia-Pacific, South America, and beyond
- 8 cloud regions
- 100 Gbps national backbone, scalable to 400Gbps
- 18,900+ interconnections
- 100% dedicated backbone
- NAP of the Northwest

Flexential Interconnection

As a core offering within the Flexential Interconnection portfolio, Cross Connects pair well with our collection of connectivity solutions, including Data Center Interconnect (DCI) for point-to-point connections, IP Bandwidth for internet connections, and Cloud Fabric for connections to the leading public cloud providers (AWS, Azure, GCP and Oracle).

Benefits

- Seamlessly integrated with the FlexAnywhere® Platform
- Supports connectivity to the Flexential ecosystem of networks, service providers, and platform offerings
- Cost-effective, compared to wider industry competition
- Includes the ability to order and provision via self-service capabilities within the Flexential Xperience Portal (FXP)
- Pack pricing is available for high-density deployments
